

WARSAW
ENGINEERING &
FABRICATING INC.

About WEFab:

Warsaw Engineering and Fabrication, Inc. began in 1985 and is a family owned business in northeast Indiana. We solve custom fabrication and equipment challenges from design through installation by using the latest technologies for each project, including AutoCAD and 3D Autodesk Inventor. Our welders are certified in structural, pipe, and rotational equipment with CWI's on staff. We offer an array of mobile industrial maintenance services, a managed storehouse for inventory, parts, and tool supply, and have fully equipped shops for stick, MIG, and TIG welding, shearing, breaking, and precision cutting from our oxy-acetylene, plasma, and waterjet cutting tables. WEFab remains price competitive while keeping responsiveness and follow-through consistent to exceed customer expectations.

We would appreciate the opportunity to earn your business and become your provider for future needs.
